

Ladies and Gentlemen of the Commission, Greetings,

While I appreciate the concerns of the persons who approach you on this occasion and request an FCC-determined bandwidth limitation for Amateur Radio HF applications, I must object to the concept and principle.

Although there have been some persons who have used inordinately wide modulation techniques in order to be intentionally disruptive, I believe the Commission should act to punish those who do so...NOT to limit the opportunity of legitimate experimenters and aficionados of various modulation techniques.

This mode of "wide fidelity" for SSB techniques should, in my opinion, be subject to the same cooperative band planning (so-called "Gentleman's Agreements") that the Commission recognizes and encourages for any other modulation or emission type except where overwhelming band constraints exist (ie: the already narrow "WARC" bands and the new 60 meter channels)

Thank-you for this opportunity to participate in the democratic process of our Government.

Paratus et Vigilans
